
AFTER FRAUDS

COMPUTER FORENSICS: INVESTIGATIONS INSIDE COMPUTER SYSTEMS

By building computer forensics into the corporate investigator's toolbox, and analyzing electronic data with an investigator's eye, we provide a unique, cost-effective—and global—resource for law firms and in-house counsel during litigation and internal investigations.

Some of our computer-forensics work is on behalf of counsel for employers—investigating employee and former-employee misconduct through the electronic trails they leave behind. We arm our clients to surprise their adversaries with evidence that was thought irretrievably deleted. We routinely gather and analyze digital evidence from computers, servers, mobile devices and other electronic media. We can do a small project or a deep look depending on the circumstances. We do this forensic work all over the United States and abroad.

We uncover evidence bearing on:

- ▶ Misappropriation of trade secrets
- ▶ Embezzlement
- ▶ Kickbacks from vendors
- ▶ Foreign Corrupt Practices Act violations
- ▶ Fabrication of electronic documents and email
- ▶ Claims of discrimination and wrongful termination

Our forensic expertise includes:

- ▶ Recovering deleted emails, text messages, documents and photographs
- ▶ Accessing forensic information in cell phones, BlackBerries and other mobile devices
- ▶ Recreating a timeline of activity on a computer, such as specific webpages visited and documents printed
- ▶ Analyzing complex relationships in large quantities of data
- ▶ Stripping away online anonymity – including hard-to-trace email addresses, blog postings and website creation
- ▶ Preserving data for potential litigation or future investigations
- ▶ Decrypting password-protected files
